STOP STOCKOUTS

Patients with chronic mental health issues cannot wait till next month for their medication from hospitals or clinics. So many Mental Healthcare users have difficulties with medication stock out issues and many don't know what to do when they are told to come back next month for their medication. Many patients cannot afford to not take their chronic medication and not taking the medication can lead to side effects and relapse, and can impact their treatment.

So what do patients do when they arrive at the hospital or clinic for their meds and they are told there is no stock? How do NGOs or healthcare professionals help to report medication stock out issues so that we can advocate for better access to treatment?

Join SADAG, Stop The Stockouts Campaign and Section27 for a free Webinar on Wednesday the 18th November 1pm – 2pm with a panel of experts explaining impact of medication stock outs on patients, how to report medication stock outs, importance of access to treatment. We encourage mental health care users, patients, support group leaders, health professionals and NGOs to attend the webinar and learn more about how we can work together.

Register for your free seat for Wednesday's Webinar at 1pm-2pm
